

eMobileSales

InfoLogix eMobileSales is customizable, packaged mobile software application that increases sales force productivity and improves the quality of customer transactions.

- Increase sales force productivity and effectiveness
- Enhance the quality of customer interactions
- Integrates with most existing accounting applications
- Improves enterprise cash flow
- Accept payment with signature capture

Sales professionals can enter sales orders, access product pricing and descriptions, time-critical information, including sales opportunities, account details, service requests and other sales data, while in the field or at the point of customer contact. Through pervasive and frequent data access, InfoLogix eMobileSales keeps your sales team better informed with current data. When integrated with eMobilePay sales professionals can shorten sales cycles and reduce the delay in realizing payment for services and receivables

In the past, companies had to make significant capital investments in Sales Force Automation (SFA) systems to help manage orders and cash flow. Now through a hosted, customizable software solution InfoLogix reduces the typical price of implementation to a fraction of what it used to be. It also improves system effectiveness with an almost immediate return on investment. Integration with our eMobilePay software additionally provides for the acceptance of payment transactions in real time completing the sales order and posting it to your back office.

InfoLogix eMobileSales modules include

- Manage and Create Work Orders
- Wireless Payments
- Inventory Management
- Customer Invoicing
- GPS-enabled Route Management

Casio IT-3000 Rugged Payment Terminal
